Implementation Science and Evaluation #03:
IMPLEMENTATION SCIENCE IS ABOUT MAKING THINGS HAPPEN

Did you know?

Having an **effective intervention** may not necessarily lead to effective **outcomes**. There is still a need to attend to how it is implemented!
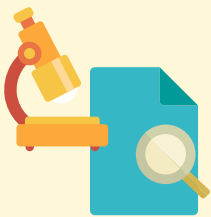

Recap: IS definition — The study of factors that influence the full and effective use of innovations in practice.

Effective Intervention

- Programmes or practices supported by research evidence

"WHAT"
Usable Interventions

×

Effective Implementation Methods

- Implementing the evidence-based practice in the real world with fidelity

"WHO"
Workgroups or implementation teams

"WHEN"
Implementing in a systematic manner according to stages

"HOW"
Following IS frameworks and strategies

×

Enabling Context

- The environment and capacity (e.g., policies, socio-economic factors) within a community that enables the implementation of the programme

Context within which the intervention will be implemented

=

Socially Significant Outcomes

An example: Baking a chocolate cake

- **What:** Tried and tested recipes

×

- **Who:** Seek guidance and help in implementation
- **When:** Follow the implementation sequence
- **How:** Improve through continuous practice

×

- Consider budget, time, and available tools at home

=

Yummy chocolate cake!
